## What you need to be a good consultant:

✓ Be authentic, reflected & mature in your interactions with team members & the client

✓ Have good communication skills, presentation skills, body language & actively engage your interaction partner(s)

✓ Enjoy constant learning, learn quickly, & regularly transfer existing knowledge into a new context

✓ Be entrepreneurial, a strong problem solver, & have the drive to find the best solution for your clients

✓ Not being afraid of uncertainty, ambiguity & incomplete information - willingness to fill in the gaps & be creative

✓ Display stress resistance & an effective working style while handling a high workload

## Leverage your experience in academia:

✓ Experience in managing communication with professors/ invited speakers/other scientists

✓ Handling collaborating projects with other groups

✓ Successfully presented in front of international audiences during conferences (and enjoyed it)

✓ Presenting & discussing with other scientists during lab meetings & journal clubs

✓ Enjoy to embark on new projects, gather & comprehend knowledge of new scientific topics

✓ Follow new findings & implement them into the project

✓ Design novel experiments vs. repeating what was done in published articles

✓ Successful implementation of “customized science”

✓ Ease in creating “discussion” & “outlook” sections in presentations & publications

✓ “What if” questions & assumptions that may propel your science forward

✓ Staying concentrated during a 24 hour long, 2 hours’ time point experiment...

✓ ... and prepare the next progress report in parallel
